

Distributed Information Service for Sage HRMS

Enterprise software such as Sage HRMS and Sage HRMS HR Actions® often requires integrating with other software such as time reporting, point-of-sales systems, payroll, and applicant tracking systems. Distributed information Service (DIS) for Sage HRMS is the tool to make those integrations easier.

Distributed Information Service is a Windows Service that automates the exchange of data on a scheduled basis. Data can be transferred between a database and remote ftp site, networked computer, or remote web service. DIS enables employee data to be accurately maintained in disparate systems without redundant data entry.

Scheduled imports and exports:

Source or Destination	Protocols
Local or network directories or file shares	SMB
File transfer services	ftp, ftps, sftp
Third-party web services	http, https

DIS also supports on-demand exports using our secure Windows application.

Any database data

Any data can be extracted from a SQL server, transmitted securely, and exported to comma-separated value (.csv) files located on remote computers. Any number of tables and files can be processed in a single request, directly from database tables or stored procedures.

Provides secure transmission

DIS supports standard secure protocols to protect valuable data and provides compressed, encrypted transmission for on-demand exports.

Flexible scheduling

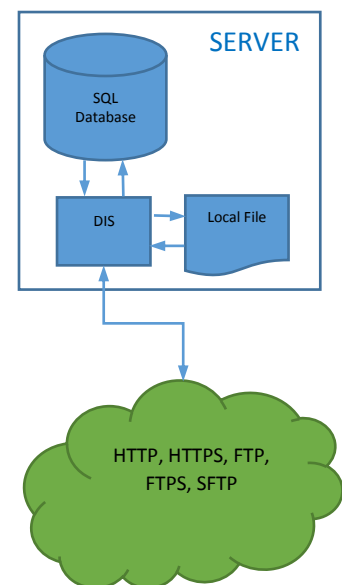

DIS supports completely customizable scheduling that meets any need.

Maintains diagnostic log files

DIS maintains diagnostic log files that are readable with Microsoft Excel®.

Benefits

- **Save time**
Scheduled exports of .csv files to local or network file shares and scheduled exports of .csv files to remote web services ensure timely transfer of data and uninterrupted processes.
- **Save money**
Eliminate duplicate data entry and free up staff for more productive initiatives.
- **Minimize errors**
Frequent synchronizations ensure accurate data across all systems.

For integration with Active Directory, check out Sage HRMS Active Directory Conduit.
